Facts about Mosquitoes

Where and When are Mosquitoes Found?

- While mosquitoes can be found at any time of day, they are most commonly active at <u>dawn</u>, <u>dusk</u>, and at <u>night</u>. Mosquitoes can often be found in damp shady areas, near <u>still water</u> and plants where they can shelter and lay their eggs.
- Most mosquitoes are active in the <u>spring</u>, <u>summer</u>, and <u>early fall</u>

What's the Deal With Mosquitoes?

- 51 varieties have been observed in Massachusetts, but not all feed on humans
- The <u>female</u> mosquito <u>drinks blood</u> in order to produce eggs, but males mostly consume nectar
- Mosquito bites produce itchy red <u>bumps</u> that can be treated with <u>calamine lotion</u>, <u>hydrocortisone cream</u>, or an <u>ice pack</u>
- Female mosquitoes are attracted to the <u>carbon</u> <u>dioxide</u> produced by exhalation

Why Are Mosquito Bites a Concern?

Certain species of mosquito can carry viruses that spread to humans through their bite. In Massachusetts the most common diseases caused by mosquito bites are <u>Eastern</u> <u>Equine Encephalitis</u> (EEE) and <u>West Nile Virus</u> (WNV).

EEE

 Symptoms include fever, stiff neck, headache, lack of energy, and swelling of the brain, which appear 3-10 days after infection. There is currently no treatment for EEE

WNV

- Most will have no symptoms, however about 20% will experience fever, aches, nausea, and vomiting
- In rare cases severe illness, such as <u>encephalitis</u> or <u>meningitis</u> will develop

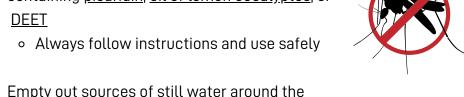

Who is Most At Risk?

- Those at the greatest risk of developing severe cases of <u>Eastern Equine</u> <u>Encephalitis</u> are those <u>over the age of</u> <u>50</u> and those <u>younger than 15</u>
- While severe illness due to <u>West Nile</u>
 <u>Virus</u> can occur at any age, people <u>over</u>
 <u>the age of 60</u> are at the greatest risk

What Can I Do to Prevent Bites?

 When going outside use insect repellents containing <u>picaridin</u>, <u>oil of lemon eucalyptus</u>, or <u>DEET</u>

- <u>Empty</u> out sources of still water around the house and yard such as buckets, toys, flower pots, etc.
- <u>Inspect</u> window and door screens for any holes or tears and <u>repair</u> appropriately to prevent mosquitoes from entering the home
- When possible, wear <u>long-sleeved shirts</u> and <u>long pants</u> while outside to keep mosquitos away from the skin
